SAFE MATERIAL HANDLING SOLUTIONS

BENETECH, INC.

Benetech is a global leader in comprehensive, performance-based bulk material handling solutions.

Material Handling Experts

Our complete solutions toolbox address a wide range of issues in the bulk material handling systems at surface and underground mines, coal fired electric generating plants, refineries, steel mills, pulp and paper mills, biomass facilities, cement plants, coal trans-loading facilities, aggregate, and stone operations.

Conveyor Rollers & Belt Support

Ordering Idlers

There are many different sizes and types of idlers made by multiple manufacturers, so you must order the correct size and type to minimize problems in the conveying system. Incorrect idler sizing or specification can lead to belt damage, cargo spillage, premature equipment failure, or even more catastrophic events. Therefore, take care while ordering and using the correct size frames and idlers in a conveying system. In some cases, the materials used in the construction of the idler frames or idler rolls may not be compatible with the material being handled, and contamination of the conveyed product can occur. For ordering assistance, call an AIRMATIC specialist today.

The Benetech MaxZone® product line is designed to reduce maintenance time and cost while maximizing material throughput, system uptime, and safety for plant personnel.

Load Rating Standards

Importance of Load Rating

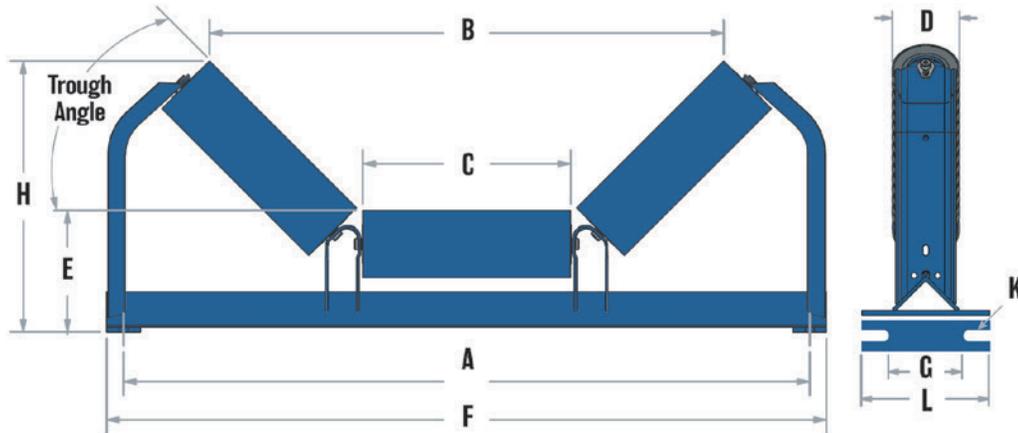

An idler's load rating is the specified load that an idler can carry at any point. The CEMA system categorizes idlers according to their load-carrying capacity or load ratings. The CEMA tables are generally selected based on bearing L10 life of 30,000 or 60,000 hours (dependent on series), with the idler roll rotating at 500rpm. CEMA gives you the standard load ratings that any CEMA B, CEMA C, CEMA D, and CEMA E should handle. Using various formulas will ensure the idler you select for a customer is within these load ratings to simplify and categorize the CEMA series for a manufacturer.

Load Ratings for CEMA B Idlers (lb)				
Belt Width	Trough Angle			
	20°	35°	45°	Return/Flat
18	410	410	410	220
24	410	410	410	190
30	410	410	410	165
36	410	410	396	155
42	390	363	369	140
48	380	353	351	125

Load Ratings for CEMA C Idlers (lb)				
Belt Width	Trough Angle			
	20°	35°	45°	Return/Flat
18	900	900	900	475
24	900	900	900	325
30	900	900	900	250
36	900	837	810	200
42	850	791	765	150
48	800	744	720	125
54	750	698	675	CEMA D
60	700	650	630	CEMA D

Load Ratings for CEMA D Idlers (lb)				
Belt Width	Trough Angle			
	20°	35°	45°	Return/Flat
24	1200	1200	1200	600
30	1200	1200	1200	600
36	1200	1200	1200	600
42	1200	1200	1200	500
48	1200	1200	1200	425
54	1200	1116	1080	375
60	1150	1070	1035	280
72	1050	977	945	155

Measurements

A Mounting Width

Mounting on the conveyor where bolts will be set in.

B Tip-To-Tip Top Width

This dimension is used to provide equal idler roll clearance and belt fit.

C Roll Length

The roll's length and the slot placement are used to ensure the roll will fit within the center/end brackets

D Roll Diameter

The roll diameter is the measurement of the circle at its largest point across.

E Middle Roll Height

The distance from the bottom of the base plate to the top of the center roll needs to be the same to keep the belt height uniform.

G Minimum Bolting Dimension

This minimum dimension makes sure the bolt spacing on the conveyor structure will bolt within the given distance.

H Idler Total Height

Total height of the idler, ensuring that the idler does not sit too high on the belt and that no structure will be in the way.

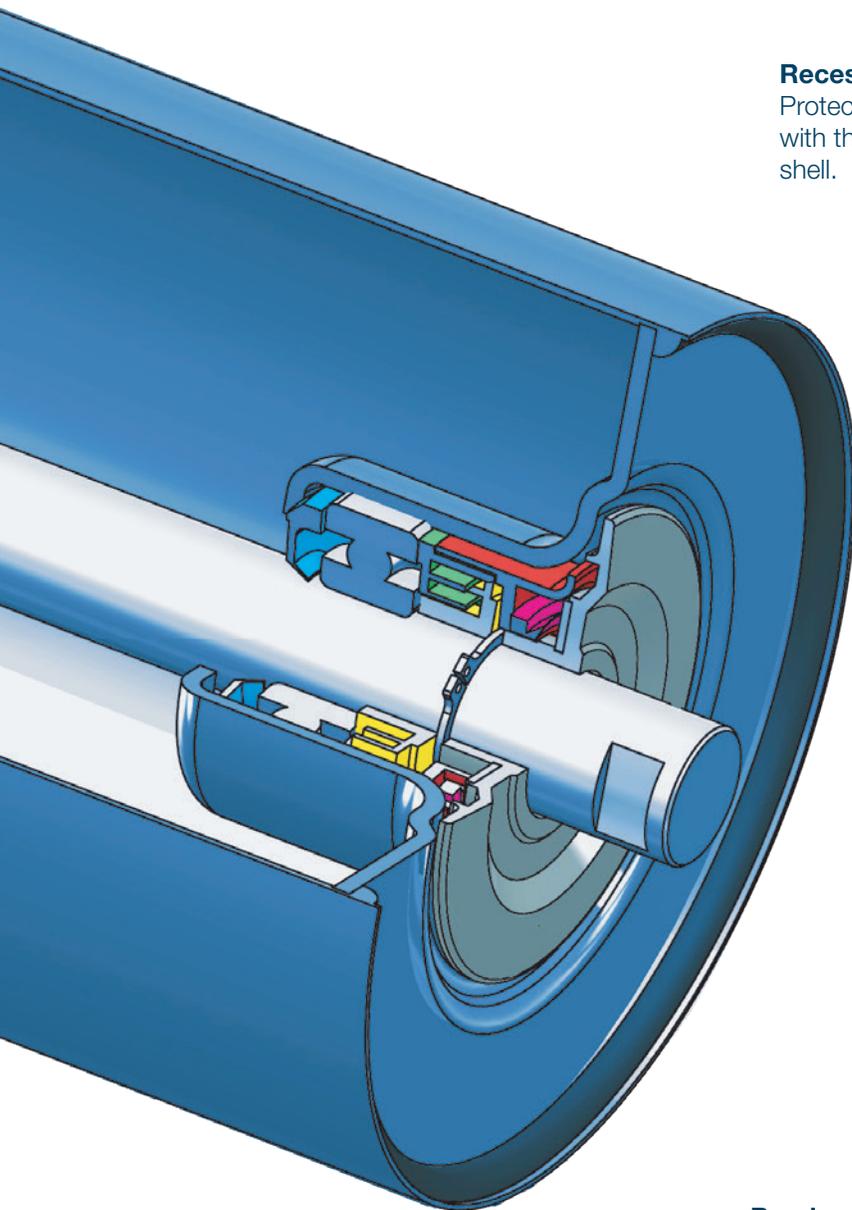

K Base Plate Slot Width

The bolt is typically 5/8" or .63". The slot is typically 11/16". Slots and bolts are per CEMA Standard.

L Maximum Base Plate Width

This maximum dimension makes sure the bolt spacing on the conveyor structure will bolt within the given distance

Benetech Sealing System

Recessed Welds

Protects the belt from wear with the full thickness of the shell.

Welded Head

Special formed disc designed to shed water, house inner workings, and create great roll concentricity.

External Deflector

Corrosion and impact- Uses centrifugal force to shed water and abrasive material.

Contact Seal

Protects against moisture, stone, and fine materials.

Solid Idler Shaft

1045 Cold Rolled Steel with slotted shaft to secure the roll to the frame.

Triple Labyrinth Seal

3rd line of defense for the bearing. Creates a longer path way for harmful

Snap Ring

Locks the seals and bearing in a stationary position to reduce wear.

Bearing Housing

Creates an air-tight seal for all working parts as the last line of defense and ensures perfect concentricity of all parts.

Idlers Features & Benefits

Sealing System

Benetech's labyrinth sealing system protects the roller from all types of contaminants found in polluted or corrosive environments such as washdown areas, fine dust, and debris.

The sealing system consists of a vertical triple labyrinth seal protecting against dust, a male and female labyrinth seal protecting against water and moisture, and a metal seal against material with particle size greater than 0625in.

This combination of multiple seal designs will maintain and extend the life of the roller against abrasive material.

Housing

The inner body or bearing chamber is a complete piece inside the roller. Its purpose is to guard all of the inner components of the roller out to the head. Unlike other rollers on the market with independent bearing chambers, the main advantage of our design is that perfect concentricity is achieved, therefore prolonging the roller life.

Bearings

Benetech rollers come with top-of-the-line 2RS ball bearings. Due to the construction of these bearings, they provide adequate resistance to radial and axial loads. The 2RS bearings promote high-level performance and require no maintenance or regreasing during their lifetime.

Rolls

The outer and inner body of the roller and the lateral metal covers provide a completely sealed and rigid capsule.

During the operational life of the roller, this unique assembly design guarantees the optimal performance of the shaft, bearings, and sealing system.

Welding

Benetech uses robotic Metal Inert Gas (MIG) welding to construct the roller head. With this technology, the weld is more resistant to cracks or breaks. Since a flux is not used, there is no chance of slag entrapment, resulting in a clean quality weld. The MIG weld improves the finish and resistance to normal wear, increasing the lifetime of the roller.

Shafts

Consistently exceeding CEMA standard load ratings, the idler shaft size will be different depending on CEMA class. The roller shafts are manufactured with top-quality grade steel.

Steel & Impact Rollers

Designed with a triple labyrinth seal, Benetech's rollers have advanced sealing protection and are sealed for life bearings that never require re-greasing. Available in various belt widths and sizes, meeting all CEMA standards.

Troughing Idler CEMA C Standard & Impact

Benetech's troughing idlers are used to transition from an impact area or load zone. They can also be used to transition from a flat pulley area, picking or feeding area. Meeting all CEMA requirements and available in standard or impact, belt widths 24-72", and troughing angles of 20, 35, & 45 degrees.

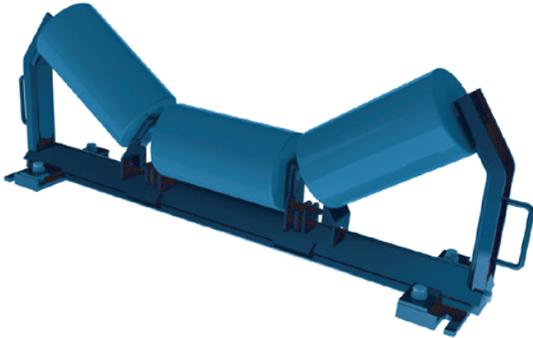

Troughing Idler CEMA D Standard & Impact

Benetech's troughing idlers are used to transition from an impact area or load zone. They can also be used to transition from a flat pulley area, picking or feeding area. Meeting all CEMA requirements and available in standard or impact, belt widths 24-72", and troughing angles of 20, 35, & 45 degrees.

Return Idler CEMA C & D

Benetech's return idlers are used to carry the belt back to the tail pulley after the load has been dumped at the head pulley. Designed to meet CEMA standards, and available in different belt widths.

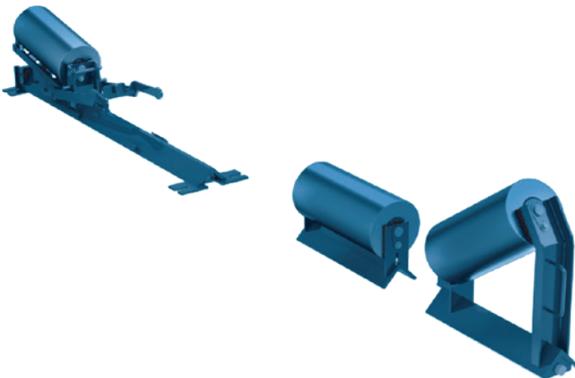

Simple Slide Idler

Roller frames slide into place without the need to remove adjacent idlers, resulting in ideal serviceability and improved safety. In addition, the compact size of the frames allows for placement even in confined spaces, assuring that you are getting the belt support you need.

Simple Slide Return

Benetech's Simple Slide Return Rollers allow for safe and simple installation and maintenance while providing optimal belt support between the discharge point and the tail pulley. In addition, the compact size of the frames allows for placement even in confined spaces.

Drop & Slide Idler

Drop & Slide Idlers can be completely dismantled, inspected, and serviced by one person from one side of the conveyor. When retracted, the roller unit simply slides out from underneath the existing conveyor belt allowing for easy roller inspection or replacement.

Drop & Slide Return

Drop & Slide Return Rollers allow for safe installation and removal of rollers from one side of the belt, when access is restricted. The design of the frame assembly allows for placement even in confined spaces, allowing one person to change out the return roller easily and safely.

Training Idler

The Training Idler responds instantly to the misalignment of the belt without special modifications to the structure. It requires no maintenance and fits into a standard drop bracket. The Training Idler can be manufactured to suit all belt sizes in operation.

Troughing Training Idler

The unique design of the components of the Troughing Training Idler frame allows it to automatically adjust itself to the conveyor belt in order to correct the misalignment in the troughing section of the conveyor, keeping your conveyor belt on track.

Warrior Impact Bed

The Warrior Impact Bed stabilizes and supports the conveyor belt during loading. Rubber bars of the Warrior cushion the belt and absorb impact resulting in a longer belt life, eliminated spillage and decreased O&M costs. The durable frame of steel supports impact on the bars.

Warrior Roll & Guide

The Warrior Roll & Guide Support bed creates a seamless seal, helping to eliminate dust and spillage in the load zone. It utilizes low friction slider bars on the wing sections and rollers in the center. Belt drag is minimized while the belt is fully supported at the edges.

AIRMATIC founded in 1944, is a woman-owned Industrial Distributor, with installation and maintenance capabilities, offering equipment, machinery, and shop supplies to the Industrial, Construction, Utility, Government, and Commercial Markets. Our products and services are sold through three business units:

The **MATERIALS MANAGEMENT GROUP** provides products and services to industries that convey, store, transport, and process powders and bulk solids from aggregates, cement, and chemicals to foods, grains, metals, power generation, and waste water treatment applications;

The **SERVICE GROUP** provides fabrication, installation, and maintenance services to improve bulk materials handling efficiency; mechanical clean-out services for silos and hoppers to eliminate material flow problems; and shop repair/rebuilding and modifications services of products sold by the Company.

The **TOOL GROUP** provides power tools, personal protective equipment, materials-handling equipment, shop equipment and MRO supplies used for production, fabrication, assembly, metal removal, maintenance, and storage in manufacturing, construction, utility, and commercial applications.

Our Customers tell us that by choosing AIRMATIC to solve their problems, they gain increased productivity, decreased costs, and a safer, cleaner work environment.

BENETECH is a pioneer in reducing combustible dust and improving bulk material handling systems. Initially focused on dust suppression, BENETECH quickly became respected as the premier dust suppression provider in the United States. As client relationships grew, BENETECH engineering group and field technician group was called upon to handle various bulk material handling issues. BENETECH embarked on a company-wide initiative in the '90s to research and develop a complete bulk material handling product and services line. Through two acquisitions and the building of "best-in-class" divisions for Dust Collection, Advanced Chute Transfer Systems, Washdown Systems, and Suppression, BENETECH has become the only Engineering, Procurement, and Construction (EPC) company with in-house engineering, equipment, manufacturing, research, chemical production, and field service capabilities.
